

**PRESS RELEASE**

**The Lightweight Variable Speed Polisher.**

Oakland, NJ

May 3, 2018

Sanding and polishing applications are time consuming tough work. In order to reduce the fatigue of the polishing professional, we ergonomically designed the VDP-700. This lightweight polisher is comfortable to hold and easy to control during the entire operation. This is done with one of two handle designs that come with the unit (C-Handle & Side Handle). The VDP-700 offers the variable speed range from 700 to 3,500 rpm.

The Unit was built with a 1250w (Rated) and 1900w (Maximum) motor along with heavy-duty precision gear system for the most demanding polishing tasks, to ensure reliability and high performance. With a 25ft, 14 AWG electrical power cord, you can cover large work areas without connecting to an extension cord. This feature assures maximum power from the electrical circuit and avoids overheating of the motor.

We also offer variety of accessories for this polisher such as a rotary back pads, diamond face foam pads, wool pads, microfiber pads, and other abrasive products.
