

Versatile® Launches Liquid Quartz™ Decorative Epoxy Flooring System

Lewisville, Texas, June 22, 2022 – [Versatile®](#) today launched its new three-component decorative epoxy flooring system that creates a beautiful, high-end designer-style floor. [1009 Liquid Quartz™](#) provides a high-performance traffic surface with modern, upscale aesthetics that give the appearance of a high-build color quartz system.

1009 Liquid Quartz™ is a high-build, self-leveling epoxy flooring system that is built on 100 percent solids epoxy technology. This new product enables a faster application using fewer installation steps and hours compared to standard epoxy and polyaspartic quartz broadcast systems. The self-leveling properties allow for easy repair of minor damage when needed and typical installations provide a 1/8-inch to 1/4-inch build in only one application.

Liquid Quartz™ offers residential, commercial, or institutional spaces with impressive durability and beautiful designer style. Since it is self-sealing, it does not require a separate topcoat. However, an additional polyaspartic topcoat application is recommended for additional protection against scuffing, foot traffic, and UV resistance for a floor that will last a lifetime.

“We are excited to add our new Liquid Quartz to our line of high-quality decorative floor coatings that offer a strong, durable finish that is beautiful and unique for every space,” said Richard Van Bergh, President of Versatile.

About Versatile Building Products

[Versatile Building Products \(Versatile\)](#) is the leading manufacturer and retailer of high-quality, direct-to-concrete epoxy, polyaspartic, and polyurea flooring, as well as chemical-resistant urethane coatings designed for concrete garage, commercial, and industrial floors.
